---

After a career in corporate financial and technology management, I am pursuing a degree in Software Engineering with a focus in Data Science. I aim to combine my business and technical skills to deliver A.I. solutions to small and medium-sized businesses. I believe that Deep Learning can be applied to nearly all aspects of business and will become a critical success factor in the near future. My goal is to help businesses exploit these technologies to improve their customers' experience as well as their employee satisfaction and performance.
